PRESS RELEASE

Bionetix International - expands into European Market!

Bionetix International; headquartered in Montreal, Canada, is now a Wholly Owned Subsidiary of Cortec Corporation in the business of manufacturing microbial based bio-products. With more than 30 years of Cortec's experience as a world leader in environmentally-safe materials protection technologies, Bionetix's product range is a natural extension of the Cortec® product offerings. Our integrated resources will provide our customers with unique benefits of remediation, and bioaugmentation. We will continue to expand our portfolio of products and service capabilities, creating additional value for our clients worldwide.

Bionetix International is comprised of solid, proprietary technologies to produce biological waste treatment products that are used in thousands of applications and various industries throughout the world. The purpose of Bionetix products is to degrade target substances in waste systems by using natural methods and develop environmentally safe manufacturing and disposal processes.

Capability of microorganisms to transform pollutants and synthetic chemicals into sources of energy and raw materials for their own growth, proves that expensive chemicals can be replaced with biological processes that are lower in cost, more efficient and acceptable for the environment. Bacteria used in the Bionetix line of products degrade more complex chemicals along with higher volumes of waste materials.

Before

After

A food processing plant discharged 600 kg/day of material consisting of: 50% protein, 30% vegetable oil, 20% water. BCP22 and STIMULUS were applied. Fourteen days later there was only some untreated materials due to continuous discharge.

Bionetix has a wide range of products for numerous applications that can be divided in 5 major fields:

a) Industrial Waste Treatment - Treatment of waste water on site prior to discharge to sewage. Bacteria specifically selected to degrade target substances in waste water systems, like fats and oils, food, beverage and alcohol.

b) Municipal Waste Treatment - Enhances waste treatment in municipal waste water. Reduces organic acids, ammonia and toxic substances, controls odor. Increases treatment efficiency. Reduces plant upsets from shock.

c) Institutional and Household Market - Biological cleaners and janitorial applications, grease trap treatment, urinals, odour removals, disinfectants and septic tank treatment.

d) Concentrates and Additives – Green formulations of concentrated biological cleaning solutions

e) Agricultural Treatments - Grow higher quality crops...have greener fairways and reduce impacts on land and dependency on chemicals and reduce input costs.
