## Eco Works® made in Europe

EcoCortec d.o.o. is proud to announce that new and improved Eco Works® is now available for distribution throughout Europe at highly competitive pricing.

Eco Works® Biodegradable & Compostable Films and Bags are specifically designed to replace LDPE, LLDPE and HDPE films used in a wide variety of applications ranging from protective industrial films, retail packaging and agricultural films to high performance

organic collection bags with drawstring closures. Eco Works has properties superior to traditional non-biodegradable plastics without sacrificing biodegradability or compostability. Eco Works® is international certified prod-

uct with certification logos by ASTM and DIN CERTCO.

This latest advancement in biodegradable plastic technologies offers composters a lower cost, more effective means of organic waste collection.

As compostability and environmental image become more and more important, Eco Works offers a very marketable and responsible alternative to most films used in retail storage, shipping, display and packaging.

### FEATURES

- 100% Biodegradable & Compostable
- Contains NO POLYETHYLENE
- Leaves no residue in finished compost

- Superior strength, shelf-life and curb-life
- Appearance comparable to HDPE
- Contains annually-renewable, biobased resin blend
- Biodegrades at the same rate as common organic material
- Conversion to CO<sub>2</sub> and H<sub>2</sub>O in weeks under commercial composting
- Ideal for restaurants, schools, curb-side programs and agricultural uses
- Certified under ASTM D 6400-99, DIN CERTCO, DIN V 54 900 and others
- Patented in US and Europe
